

Salt Water SPORTSMAN

November 1987 Volume 48 Number 11

The Leading Edge

Based on his expertise in fisheries and biological oceanography, Dr. Mitchell A. Roffer (8542 S.W. 102 St., Miami, FL 33156) has developed a forecasting service for the recreational as well as the commercial fisherman working the waters of the Atlantic, Gulf of Mexico, Caribbean, and Northern South America. Dr. Roffer and his team of scientists put out up-to-the-hour data on ocean currents and eddies, cold and warm pockets, and color changes with amazing speed. Their goal lies in predicting where marlin and tuna are most likely to be.

Information is transmitted via Easy Link, telecopiers, single side-band radio, and by surface express. Subscribers must sign a contract agreeing not to make the charts and data available to anyone else. The company also offers customized service and will forecast conditions for almost any part of the world.
